

Damilola Oluwafemi

Software engineer

oluwafemidamilola21@gmail.com · dammy.dev · github.com/TheOluwafemi · linkedin.com/in/damilola-oluwafemi · npmjs.com/~dammyskillz_

Software engineer with eight years across banking, fintech and crypto, now building developer tools. Creator of Flaghoist, open-source feature flags on the edge.

OPEN SOURCE

Flaghoist

Creator and sole maintainer, 2026–present

Open-source, OpenFeature-native feature flags that run on Cloudflare Workers. 14 npm packages in a TypeScript monorepo: an evaluation engine, a Hono server, storage adapters for KV, Redis, Postgres and SQLite, a CLI, an MCP server, and Vue bindings. Verified against a live server from seven languages.

dsl-query-builder

Author, 2025

Zero-dependency TypeScript query builder for OpenSearch and Elasticsearch DSL, under 15 KB.

vue-form-manager

Author, 2025

Form validation for Vue 3 from plain configuration objects, with Zod and full type safety.

EXPERIENCE

Frontend engineer, Upflow

Sep 2022 – present

Remote

- Collaborating with the design and marketing teams to improve the website, and add new reusable website sections and pages.
- Interfacing directly with the internal marketing team and other stakeholders to implement lead-generation tools and strategies.
- Managing tracking and lead generation tools: Chili Piper, HubSpot, Segment.
- Managing and delegating the content management process using Storyblok. This helps halve the development cycle and allows other team members to change and improve the website content.

Frontend engineer, Yellowcard Financials

Apr 2021 – Aug 2022

Remote

- Supported the process of launching in 10 new markets (countries) in Africa, by updating transactions and KYC methods.
- Coordinated and managed the revamp of the company's website, following a brand refresh.
- Maintained and added new features to the Yellowcard web application to improve customer experience.
- Integrated multi-language support in the marketing website and web applications to improve engagement and acquisition in non-English speaking countries.
- Iterated on marketing website performance to increase SERP rankings and conversions. Improved the Lighthouse audit by 33% by following accessibility and performance best practice.

Frontend engineer, Sterling Bank (Gomoney)

Nov 2019 – Mar 2021

Remote

- Collaborated with the design and marketing teams to improve the website, increasing conversion rates from the website by 45% and improving page visibility.
- Maintained and added features to the admin management system for the flagship product, improving customer management and dispute resolution by 70%.
- Created modular, reusable Vue components with the front-end logic to deliver the best user experience.
- Integrated and consumed back-end REST APIs designed for system operations.

Frontend engineer, Fidelity Bank

Aug 2018 – Nov 2019

Lagos, Nigeria

- Unit lead for the front-end and UI/UX unit.
- Created modular Angular components with the front-end logic to deliver the best user experience.
- Fully digitised the visitor and staff attendance management system, which led to a 50% reduction in visitor sign-in and sign-out time and a 100% paperless system.
- Implemented an in-house API management system for designing, publishing, documenting, analysing and monitoring APIs in a secure environment.

EDUCATION

Bachelor of Technology, Computer Science

Akure, Nigeria

Federal University of Technology, Akure
